

MineralVeneer

The revolution of surfaces for
interior design - mineral, ecological

... when it matters!

Material Description

MineralVeneer is the alternative to plastic laminated surfaces and consists of a homogenous, natural mineral surface with a thickness of 1.0 mm (0.039"). In addition to our standard color tones we can match the colors you need with your control samples.

MineralVeneer

The revolution of surfaces
for interior design - mineral,
ecological

Product Features

The advantages of this new composite surface are versatile:

- A regulated and healthy indoor climate due to the porous surface and all natural ingredients of MineralVeneer.
- MineralVeneer is printable without applying any primer due to the open and non-resinous surface.
- The MineralVeneer, constructed on a mineral base, is cement-bound and fiber-reinforced. The homogeneously colored layer owns excellent processing features with regard to bonding, the edge execution and the shape cutting with carbide-tipped tools on wood-working machines.
- Due to the consistency of MineralVeneer, both the surfaces and the edges are consistent in appearance because of the uniformity of the base materials.
- MineralVeneer is available in large formats of 3,050 x 1,250 x 1 mm (120" x 49" x 0.039") in thoroughly dyed standard colors. Customer-specific colors are available as of 500 m².
- Perfect room acoustics in an appealing design:
With MineralVeneer, we also produce acoustic elements with 320,000 nearly invisible holes per m². The attractiveness of the MineralVeneer surface does not get lost by the 0.5 mm perforation.
- MineralVeneer complies with fire protection class „B-s1-d0“, and as a composite test with the RiBoard® carrier plate, it complies with „A2-s1-d0“ (noncombustible).
