

MineralVeneer, the surface revolution for interior architecture – mineral based and environmental-friendly.

MineralVeneer is a new material developed by Richter akustik & design. Ideal for high-end interior surfaces to create unique spaces, cabinetry, bathroom and office furniture, store-fixtures, RV's and more. This makes MineralVeneer a very attractive alternative to traditional plastic surfaces. The pleasant haptic experience makes this new material a favorite eco-friendly surface solution. At the Interzum trade show in Cologne, Richter akustik & design received the "Best of the Best" award for MineralVeneer.

What is MineralVeneer made from?

MineralVeneer is mainly mineral-based, cement-bound and a fibre-reinforced material. The thin and homogeneous surface has a thickness of just 1 mm.

Unique product properties:

Due to its unique material properties the MineralVeneer panels improve the indoor air quality in a very pleasant manner. Interior spaces become more healthy and a feel-good environment.

MineralVeneer panels are easy to work with and processed with standard woodworking equipment. Matching edge banding is available for a uniform panel appearance.

Perfect room acoustics with a modern and attractive design.

MineralVeneer can also be used to produce and design acoustic elements. With its 320,000 near-invisible holes per square metre and its 0,5 mm perforations the panels are ideal to create attractive and innovative environments.

The new MineralVeneer meets fire rating category "B-s1-d0". A tested composite panel of RiBoard®-substrate, MineralVeneer achieved fire rating "A2-s1-d0".
