

StoneVeneer – natural stone surfaces for all interiors

Wood, leather, stone – most people prefer natural, genuine materials when it comes to designing ceilings, walls, furniture and other surfaces, for the touch and visual appeal cannot be achieved by similarly looking plastic materials. However, furniture or surface claddings of massive stones would in most cases be too heavy for being installed in homes and too hard for processing them.

The solution is called Stone-Veneer

With their product Stone-Veneer, Richter akustik & design has found a way to merge the positive aspects of real stone and the lightweight characteristics of other materials for the interior decoration.

Stone-Veneer is available in different color tones and surface structures. Since it is real and the stone from which the material is cut is billions of years old no one piece resembles the other. Each piece of Stone-Veneer is unique in its appearance and texture. This cannot be achieved with plastic or other imitations.

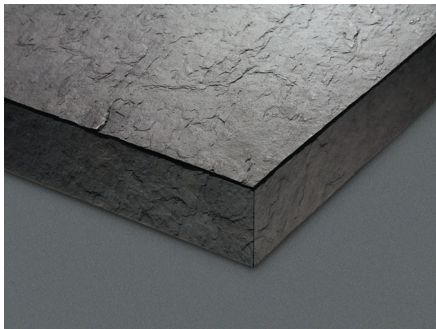

The real stone layer is just a few tenths of a millimeter thick, which makes it to a large extent resource-efficient. Together with its carrier material, Stone-Veneer is an absolutely lightweight material compared to other natural stones and can be used for many purposes such as furniture fronts, wall and ceiling claddings and so much more. The backing of the material is GRP-coated and can additionally receive a fleece layer or optionally be equipped with primer for bonding with dispersion adhesives. Moreover, Stone-Veneer is also available prefabricated, pressed on MDF panels having different thicknesses from 3 to 18 mm or on other carrier materials like GRP, MDF, birch multiplex having different thicknesses from 1 to 20 mm - Stone-Veneer offers unlimited application possibilities.

Stone-Veneer will be prepared by Richter akustik & design in such a way that it can be processed with standard woodworking tools using carbide tooling. A direct bonding to sub-surfaces in interior and exterior applications is possible by applying the appropriate special adhesives. In case of only light applications you can also use the optional self-adhesive film (peel and stick).

Since its launching in 2006, Stone-Veneer has impressed the entire architectural and design sector for surface treatments as well as numerous end users. Among others, it was awarded the "Design-Plus Award 2009" by the German Design Council as well as the "Technology Award in Gold" in Verona, also in 2009.
